

Leadership Conference Data Analysis Report

1. Introduction

The purpose of this project is to analyze student feedback from a university-hosted Leadership Conference. The goal is to extract insights about students' self-reported growth in leadership skills, communication abilities, and confidence using both qualitative (open-ended text) and quantitative (Likert scale) data.

2. Data Preprocessing

- **Null Values:** Columns with a high percentage of null values were deleted to ensure data quality.
- **Data Types & Renaming:** Column headers were renamed for clarity. Redundant or irrelevant columns were dropped.
- **Text Cleaning:** Free-text responses were processed for keyword extraction and frequency analysis.

3. Insights from Open-Ended Responses

Students were asked to reflect on what they learned during the conference. Responses were analyzed to uncover common themes:

Key Observations:

- Frequent use of words such as “confidence”, “advocate”, “public speaking”, “communication”, and “leadership”.
- Many students mentioned applying what they learned to real-life scenarios, especially in personal growth and peer interaction.
- The overall sentiment reflected strong engagement and perceived value from the sessions.

Sample Interpretation:

“I learned how to better advocate for myself.”

“I feel more confident in speaking to new people.”

These responses show a consistent theme of empowerment and skill application.

This chart is a bar graph titled "Number of Participants per Session" and it visually represents how many students attended each session during the Leadership Conference.

Breakdown of the Chart:

- X-axis: Lists the names of individual sessions, such as:
 - *From Campus Leader to Career Leader: Bridging the Gap for Success*
 - *Beyond Words: Cultivating Connection with Neurodivergent and LGBTQ+ People*
 - *Elevator Pitch*, etc.
- Y-axis: Shows the number of participants in each session (from 0 to 8).

Key Observations:

1. Highest Attendance:

- The session *"From Campus Leader to Career Leader: Bridging the Gap for Success"* had 8 participants, the highest in this dataset.
- This suggests strong interest in sessions focused on career progression and practical leadership pathways.

2. Moderate Attendance (3–5 participants):

- Sessions like *"Beyond Words..."* and *"The Mess, the Hassle..."* had 3–5 participants.
- These themes often center around self-advocacy, diversity, and student development.

3. Low Attendance (1–2 participants):

- The least attended session was *"Like and Follow: Leading Through Social Media"* with only 1 participant.
- This might suggest lower student interest or a scheduling conflict.

This chart provides valuable insight into **student interest levels** across different topics:

- **Professional Development** sessions attracted more students.
- Sessions focused on **digital leadership** or **creative leadership methods** had lower turnout.
- Could be useful for **future event planning**—to optimize session timing or promote under-attended topics more effectively.

Chart1:

"As a result of attending this session, I have gained a better understanding of my strengths and areas for development in my career journey."

Interpretation:

- Sessions like *"From Campus Leader to Career Leader"* and *"Beyond Words: Cultivating Connection with Neurodivergent and LGBTQ+ People"* received the highest number of "Strongly Agree" and "Agree" responses.
- Most sessions received positive feedback, indicating that students left feeling more aware of their personal strengths and growth areas.
- Only a few responses were neutral or disagree, showing limited dissatisfaction.

Chart 2:

"As a result of attending this session, I feel more confident in my ability to inspire, motivate, and lead others effectively."

Interpretation:

- Again, sessions like *"From Campus Leader to Career Leader"* had the most positive impact, with high counts of Agree and Strongly Agree.
- Some sessions received Disagree and Neutral responses (e.g., *Beyond Words*, *Elevator Pitch*), suggesting that while these were valuable, not all participants felt a leadership boost.
- There's a clear trend that leadership-focused sessions had stronger outcomes in this category.

Chart 3:

"This session has improved my ability to clearly and effectively communicate with others in a professional setting."

Interpretation:

- Only one session – “Who, What, When, Where, How and Never Why” – received a visible response (Agree).
- The rest of the sessions likely didn’t gather responses for this specific question or participants skipped it.
- This indicates limited data or relevance of this specific question across all sessions.

Chart 4:

"This session has deepened my understanding of equity, inclusion, and how to engage in inclusive practices."

Interpretation:

- Only *"Beyond Words: Cultivating Connection with Neurodivergent and LGBTQ+ People"* received a response (Disagree).
- This may reflect:
 - A small response size,
 - Misalignment of expectations, or
 - That the session did not meet all participants' expectations on inclusion topics.

- Other sessions did not receive responses on this question, suggesting limited coverage of inclusion across the event.

Chart 5:

"I feel more confident in leveraging technology to complete tasks, enhance my work efficiency, or achieve my goals as a result of this program."

Interpretation:

- *"Like and Follow: Leading Through Social Media"* and *"Stand Out in Seconds: Designing Your Digital-Ready Elevator Pitch"* each had 1 positive response (Agree).
- These sessions likely focused on digital literacy or communication, making them relevant to this question.
- All other sessions showed no responses, indicating they may not have covered tech-based leadership or digital efficiency.
